Announcing WRG Forum on **Operational Excellence in Correctional Healthcare**, taking place December 8-9, 2008 at the MGM Grand in Las Vegas.

At this event, **Vertex Senior Partners Jared G. Jorgensen, Braxton J. Millar, and Todd R. Wilcox** will present the Post-Conference Workshop, “The ‘Science’ of Correctional Healthcare Staffing”.

As clinical healthcare staffing in the correctional environment is a challenge, this workshop details a staffing plan that will allow your organization to produce and present clinically appropriate staffing levels based on national standards and guidelines. During this session, you will be walked through a plan/model that presents staffing by unit, by position type, and by specific task in a format that is transparent and adequately detailed.

**Primary Objectives for this Workshop:**

1. Produce a clinical staffing plan that identifies all components of healthcare delivery and bases the staffing plan on national industry standard guidelines and mandates.
2. Provide a transparent and defensible methodology for establishing clinical healthcare staffing budgets.
3. Produce a usable and durable model that will allow the institution to forecast staffing needs, track productivity and process improvements, and assess the impact of proposed program of staffing mix changes.
